Contents

1. Introduction.
2. Fundamental particles and cosmogony.
3. Gravitation and its large-scale effect upon aether density.
4. The Sun, its planets, young stars and exoplanets.
 - 4.1. Age of the Sun and its planets - a new scenario.
 - 4.2. Formation of the solar planets.
 - 4.3. Dynamics of planetary growth - tidal action.
 - 4.4. Application to star formation.
 - 4.5. Exoplanets.
5. Why don't the Sun and stars become negatively charged over time, and cease to expel positive ions?
6. Origin of cosmic rays.
7. Neutron stars and supernova explosions.
8. The mechanism of pulsars.
9. Dying quasars as the source of gamma ray bursts.
10. Behavioural features of CT gravitational interaction.
 - 10.1. The effect of the rest of the Universe.
 - 10.2. Changes in an eccentric orbit.
 - 10.3. Effects of rotation - rotation of the Sun.
 - 10.4. Rotation of the planet.
 - 10.5. Directional effects.
11. Evolution of galaxies.
12. Photon mass, Planck's constant and the GR gravitational redshift and deflection of starlight.
 - 12.1. TEM waves are the wrong sort of aether motion for developing gravitational mass.
 - 12.2. Gravitational redshift of GR.
 - 12.3. The gravitational deflection of starlight.
13. Does rotation rotate the aether?
 - 13.1. The Sagnac effect.
 - 13.2. The twins paradox of SR.
14. Transverse velocity effects in CT, revisited: disaster or discovery?
15. Laboratory example of RLV line broadening: Plasma temperatures in nuclear fusion experiments.
16. The constancy of the 'fundamental constants' of physics.
17. Tailpiece.
18. Conclusions.

Figures

1. Basic CT model of fundamental particles and assemblages.
2. Effect of gravitational interaction on aether density.
3. Solar phenomena - radial electric field.
4. A new scenario for forming the Sun's planets.
5. Problem - Young stars, low a.m.
6. Gravitation as an interaction communicated at velocity c .
7. Solar coronal redshift - Pioneer-6.
8. Global correlation of time signals - CT significance of the Sagnac correction for Earth rotation.
9. NGC 5194/M51 showing oblique rupturing of spiral arms.
10. Structural elements of a barred spiral galaxy.
